

### UML class diagram example of the Library Domain Model.

Library book attributes *ISBN* and *subject* are **inherited** from *Book* and shown with prepended caret '^' symbol.

The *title* attribute explicitly **redefines** *name*. While type of the attributes is the same, name is different. The *lang* attribute is explicitly redefined with different type. Original type was free text String, while redefined attribute is more specific (e.g. enumerated) *Language* class. We used explicit redefinition in this case because attribute types *String* and *Language* are not related. *Language* is **enumeration** type.

Library has some rules on what could be *borrowed* and what is for *reference only*. Rules are also defined on how many books could be borrowed by *patrons* and how many could be reserved.

Library book attributes *loanPeriod*, *dueDate*, and *isOverdue* are **derived**. Length of time a library book may be borrowed (loan period) depends on library policy and varies based on a kind of book and who is borrowing it. For example, in a university library undergraduates could borrow book for 30 days, graduate students for a quarter, and faculty staff for a year. In a public library normal loan period for a book could be 3 weeks, while it could be lowered to 2 weeks for new books. Book return due date will be calculated based on the borrow date and loan period. If due date is past the current date, *isOverdue* Boolean flag which is false by default will be set to true.

Library *Catalog* provides access for the library patrons and staff to all sources of information about library items, allows to search by a particular author, on a particular topic, or in a particular format, that the library has. It tells the user where materials meeting their specific needs can be found.

This document describes UML versions up to **UML 2.5** and is based on the corresponding **OMG™ Unified Modeling Language™ (OMG UML®)** specifications. UML diagrams were created in **Microsoft® Visio®** 2007-2016 using **UML 2.x Visio Stencils**. **Lucidchart** is a nice, free UML tool that I recommend for students.
